IntelliMute Engine RPM Activation Point Not Set.

IntelliMute® Pro:

- If you are driving a speed-sensitive vehicle (e.g., a hybrid or EV), Auto Mute can help reduce unwanted audible alerts.

In such case, Quad-level IntelliShield City Filter—especially hybrids or EVs because the detector cannot sense

- Whenever engine RPMs are below the Activation Point, the arrow on the display will flash. When RPMs are above the activation point, the arrow will disappear. The IntelliMute Pro icon will appear in the display and remain until the RPMs are above the Activation Point.

- To return the unit to normal operation, press the VOLUME button to turn off the IntelliMute function. The display will return to normal operation.

- The display illumination intensity can be adjusted to suit driving conditions. The settings are: Dark, Dim, Dimmer, Bright, and Full Bright. Touching any button will also turn On the display.

- While at the Dark level under timer control, any alert will turn on and set. The IntelliMute Pro icon will appear in the display and remain until the RPMs are above the Activation Point.

- While in the brightness mode, the display will turn On and remain On for the time selected in Menu mode. The Display Timeout setting can be changed so the display is always On. In Display Timeout mode, the display scanner will turn On and off at the time selected in Menu mode. The Display Timeout setting can be changed so the display is always On. In Display Timeout mode, the display scanner will turn On and off at the time selected in Menu mode.

- To turn the display Off when traveling at slower speeds, the factory setting is turned On after 1 minute. To change this setting, select Time Out in the Options menu. If you approach a hill or bridge, the factory setting will change to Off. If you approach a hill or bridge, the factory setting will change to Off.
